

Environmental Policy

Styleprint - powered by HPIP (SPPH) with the assistance of Printing Industries Queensland are implementing and promoting environmentally sound printing practices. By recommending recycled paper, inks based on a large portion of renewable materials predominately vegetable matter, and reducing our own waste (from paper to electricity) in order to reduce our environmental footprint. Our main environmental impacts lie with quantities of waste that can be recycled, the possibility of chemical spills and our trade waste water output. All business activities are included in our objectives and targets which will be set and reviewed at least yearly to ensure continual improvement. This policy takes into account the entire scope of SPPH business aspects.

SPPH will comply with the applicable environmental legislation standards, industry codes of practice and procedures that we subscribe to. Continual improvement will be ensured by implementing environmental policies, procedures and programs to address the environmental costs and impacts of our business and will achieve this by;

- Developing and maintaining an Environmental Management System (EMS) that will enable us to set and review environmental objectives. We will produce documentation whilst monitoring our overall environmental performance.
- Managing environmental systems with adequate resources, staff and external suppliers and contractors that have undergone adequate training to ensure policy compliance.
- Committing to the prevention of pollution, focusing on minimising the release of contaminants into the environment and the efficient use of raw materials to conserve natural resources.
- Disposing of all unrecyclable waste in a manner that complies with local laws and policies whilst being environmentally friendly where possible.
- Communicating our commitment to environmental quality and to our company's environmental performance to our employees, vendors, customers, and external stakeholders.

To continue our environmental efforts we will ensure the following implementations, at a minimum, are sustained:

- Increased stringency of recycled paper, cardboard and plastic resulting in an overall increase in recycled matter to the point where all recyclable waste is recycled and not directed to landfill;
- Recommendation of recycled paper products to clients;
- Use of environmentally friendly inks;
- Recycling of contaminated rags;
- Recycling of all plates and aluminium; and
- Use of external energy consultants to reduce and monitor energy usage and peaks.

Management at all levels of Styleprint - powered by HPIP is responsible for ensuring that this policy is communicated and adhered to by all employees and subcontractors, and that it is made available to interested members of the public.

MANAGING DIRECTOR
